

PRE AND POST

PRP VAMPIRE BREAST REJUVENATION / LASER/RF NON-SURGICAL BREAST LIFT

The PRP treatment is an in-office procedure that uses the platelets found in your blood plasma. It begins with taking a blood sample from you. We centrifuge the blood, allowing us to separate the platelets. Using your own blood, concentrated plasma rich in platelets is injected into the breast. PRP encourages the growth of cells in the area injected. PRP is a staple treatment option within the cosmetic industry for healing and repairing the human body in many areas such as the breasts. You can expect a mild increase in cleavage with this experimental treatment.

Fotona Laser breast and/or Opus RF Plasma help provide skin tightening and corrective lift to the breast, as well target skin imperfections/stretchmarks and discolourations.

Pre Procedure guidelines:

- Discontinue nonsteroidal anti-inflammatory drugs NSAIDS 7 days prior to the procedure; Advil motrin/blood thinner medications.
- Accutane clients can only have this procedure done 6-12 months after the last dose.
- Avoid sun tanning in the area 2 weeks prior to treatment

Post procedure guidelines:

- After the PRP/laser treatment, it would be recommended to wear a fitted bodice (ie: a VERY supported bra)
- Do not Run or do heavy exercise for 2 weeks post treatment
- Avoid sun

This treatment is to add more volume and does add weight to the breasts and with exercise such as running will result in adverse effects, as the initial service is to lift and correct the breasts.

Post treatment care:

Day 1-2: Do not run or do heavy exercise for 2 weeks post treatment. Cleanse with a gentle cleanser, keeping the skin covered with Aquaphor/Vaseline.

Day 3-4: Continue to cleanse, do not pick at your skin or try to exfoliate, let it happen naturally. Flaking is a natural response to lasers. Continue moisturizing the skin frequently throughout the day.

Day 5-6: Continue to cleanse and moisturize with bland moisturizer. Can start using moisturizer at night as well.

Day 7: Continue cleansing and moisturizing. you can return to your normal skin care regime and use active ingredients. Usually 14 days.
